

Zirconium (square crystals yttria) is white, is solid at room temperature and at low temperatures becomes hard and brittle.

The Zirconium replace the metal structure used by the conventional prosthetic restorations (bridges).

Manufactured with computer CAD / CAM. presents the following advantages:

- translucent material which provides excellent cosmetic results
- Biocompatible materials (does not cause allergies)
- Mechanical strength
- Avoid the use of different sensitivities (hot, cold)

It is recommended to persons who demand high aesthetic and are not interested about the high construction cost pf this material.
