

Technical dentures (jaw) are removable prostheses work and divided into 3 groups:

1. Complete denture: placed in the mouth of the patient to replace all the teeth in the upper or lower jaw.
2. Partial denture: used where missing a few teeth from the mouth of the patient and it is supported on natural teeth with hooks or contacts of precision.

1. Epenthesis denture: partial or complete denture that is placed and is based on natural teeth or implants.

It takes 4 visits to the surgery and the treatment duration is 10 days.
